Height Adjustable Tilting Benches

The Height Adjustable Tilting Benches provides supportive seating designed to help children maintain better posture, stability, and alignment during seated activities, therapy sessions, and everyday developmental work.

For children with special needs, seated positioning can directly affect upper body control, hand use, and comfort during learning and therapy tasks. A therapy bench with height adjustment and seat tilt can help create a more supportive pelvic femoral angle, encourage improved spinal alignment, and provide a stable base for arm and hand function.
