

ARK Feeding Therapy Kit

ARK's Feeding Therapy Kit is a complete kit of feeding therapy tools at the best deal. Each kit comes with a handpicked selection of chew tools, Z-Vibe tip attachments, and drinking cup.

There are two different versions of this feeding kit based on the age of the person you'll be using this with. What's the difference between the two? They're both similar, except the baby/toddler version has age-appropriate baby chew tools, a friendly Bear Bottle straw cup, and age-appropriate Z-Vibe tip attachments (Mini Tip and small Spoon Tips). Whereas the children/adult version of this feeding therapy kit has chew tools with longer stems for bigger mouths, a more discreet straw cup for older kids and adults (the Cip-Kup), the Probe Tip (a larger version of the Mini Tip), and large Spoon Tips.
